Professional Summary

Computer Science and Software Development student pursuing a degree in Analysis and Systems Development at Unipê. Hands-on experience with Python and Django, including web application development, REST API integration, relational database modeling, authentication, access control, and automated testing. Strong interest in artificial intelligence, software development, and learning through practical projects. Uses Git, GitHub, Linux, and generative AI tools to support development, research, documentation, and continuous learning.

Analysis and Systems Development

João Pessoa, PB, Brazil

2026 – 2027 | In Progress

Projects and Technical Practice

Library – Catalog & Favorites

Python, Django, SQLite, REST API, Git

- Developed a full-stack web application for book catalog management, reading progress tracking, personal notes, ratings, and favorites.
- Designed the application architecture, database models, business logic, views, forms, authentication, permissions, and automated tests.
- Integrated the Open Library REST API, allowing users to search both the local catalog and an external global catalog.
- Developed a service layer with API error handling, network timeouts, data normalization, fallbacks, and on-demand persistence of external data.
- Implemented relational models, CRUD operations, user-specific data isolation, CSRF protection, authentication requirements, and POST-only data mutations.
- Created unit and integration tests using Django's testing framework, covering models, views, authentication, permissions, and database operations.

Python Projects and Programming Practice

- Developed a terminal-based Tic-Tac-Toe game using matrices, functions, conditional logic, loops, player alternation, and win detection.
- Built a dice roll simulator using Python's `random` module, reusable functions, loops, and input validation.
- Practiced problem decomposition, algorithms, data structures, functions, validation, error handling, and code organization through progressive programming exercises.

Development Environment and Open Source Practice

- Uses Git and GitHub to organize repositories, document projects, track changes, and maintain a history of development work.
- Uses Linux, terminal tools, and Visual Studio Code to configure development environments, investigate technical issues, and execute applications.
- Uses generative AI tools as part of technical research, learning, documentation, prototyping, and software development workflows.

Technical Skills

- **Programming:** Python, programming logic, algorithms, functions, conditionals, loops, lists, matrices, input validation.
- **Backend & Web:** Django, Django ORM, REST APIs, authentication, forms, CRUD, HTML5, Bootstrap.
- **Databases:** SQLite, SQL fundamentals, relational database modeling.
- **Testing & Security:** unit testing, integration testing, CSRF protection, access control, error handling.
- **Development Practices:** Git, GitHub, semantic commits, environment variables, modularization, documentation, 12-Factor App fundamentals.
- **Other:** Linux, terminal, Visual Studio Code, Docker fundamentals, computer networks, hardware, and basic troubleshooting.

Tools

- Python, Django, Git, GitHub, Linux, Visual Studio Code, Docker, SQLite, Bootstrap, Open Library API, and generative AI tools.

Languages

- Portuguese: Native.
- English: Intermediate (B1), with experience reading technical documentation and communicating about technical topics.

Strengths

- Logical thinking, structured problem solving, autonomy, continuous learning, technical research, attention to detail, documentation, and willingness to share knowledge.
